6027 (VM0010-H2L)

EN: The site must be level and very firm. Each side and corner of the base needs to be securely anchored to the ground. If the site is paved, drill through the base into the paving and fix with screws and plugs (not supplied). On soil, ensure ground is well compacted and set the anchors (9001, 9007 & 9024) into pockets of concrete. Use clips (9002) to connect the corners, sides and ends of the Greenhouse with the base. On very exposed sites, drill sills and steel base, avoiding polycarbonate / glass, and secure with nuts and bolts (not supplied).

EE: Maapind peab olema tasane ja väga kindel. Sokli iga nurk tuleb kinnitada maapinnale. Kui pinnas on sillutatud, puurige läbi alumise profiili sillakattesse ja kinnitage kruvide ja tüüblitega (pole kaasas). Pinnasel veenduge, et maapind oleks väga tugev ja pange ankrud (9001, 9007 ja 9024) alla tsemendi lohkudesse. Kasutage klambreid (9002) kasvuhoonel ja vahepealsete vuukide küljel ja otsas ning nurkliidete küljel. Väga avatud kohtades soovitate puurida auk alumisse rööpa ja terasest alusesse ning kinnitada poltide ja mutritega (ei kuulu komplekti).
